CREDIPROCURE | PITCH DECK | MARCH 2026

On-chain invoice financing for SMEs and investors.

CrediProcure transforms unpaid B2B invoices into tokenized RWAs on Creditcoin, enabling faster vendor liquidity and transparent investor yield.

Category

DeFi + RWA on Creditcoin testnet.

Deployment

Live app + deployed smart contracts on testnet.

Core Asset

Invoice NFT (ERC-721) as on-chain real-world asset.

Built by Pandu Dargah.

PROBLEM AND OPPORTUNITY

Trade finance is still slow, opaque, and costly.

What is broken

- SMEs wait 30-90 days for invoice settlement.
- Traditional factoring is paperwork-heavy and intermediary-dependent.
- Funding terms and repayment visibility are often unclear.
- DeFi investors lack transparent real-world-backed yield products.

Market context

$3.6T

Global trade finance gap.

30-90d

Typical invoice delay.

SME

Primary borrower segment.

RWA

Investor demand for auditable yield.

SOLUTION

Tokenize invoice. Fund on-chain. Repay transparently.

STEP 1

Create

Vendor creates invoice with amount, due date, and yield.

STEP 2

Mint

Invoice is minted as ERC-721 RWA NFT on Creditcoin.

STEP 3

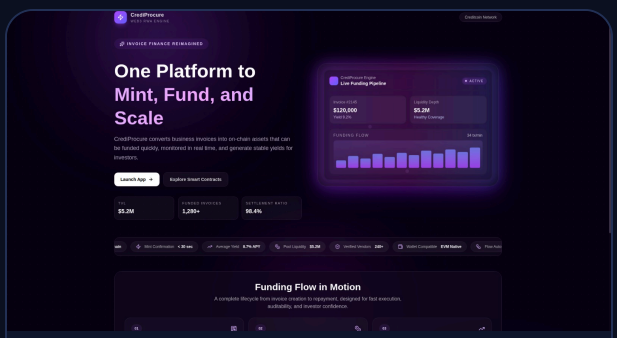
Fund

Investor funds directly or via liquidity pool.

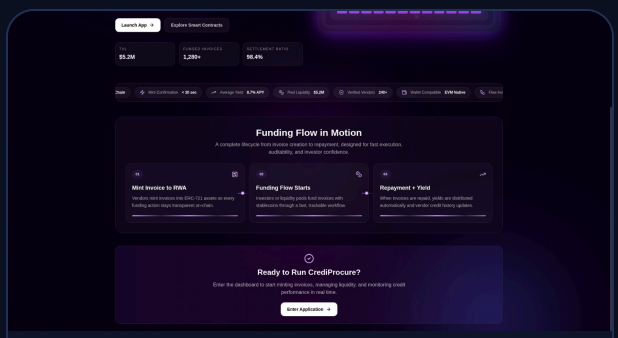
STEP 4

Repay

Repayment updates credit history and portfolio yield.



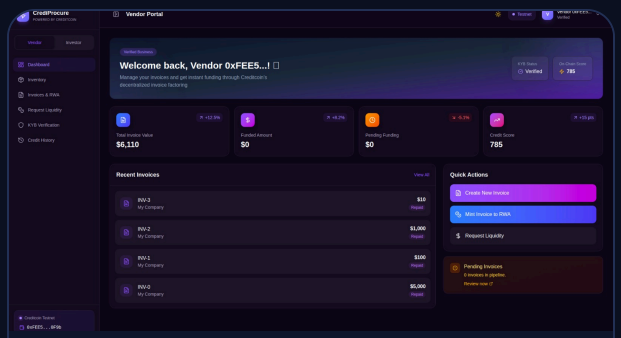
Landing: value proposition and key protocol metrics.



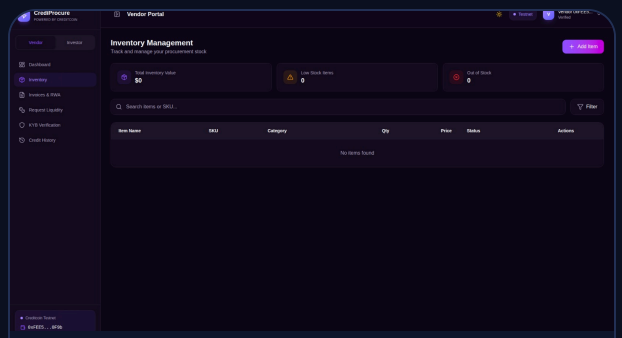
Landing: lifecycle explanation from mint to repay.

VENDOR FLOW

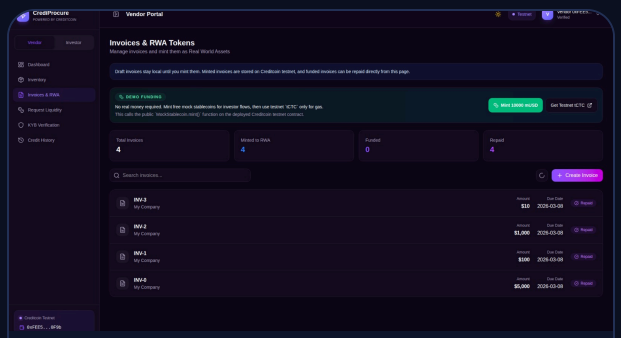
Vendor journey from invoice setup to repayment tracking.



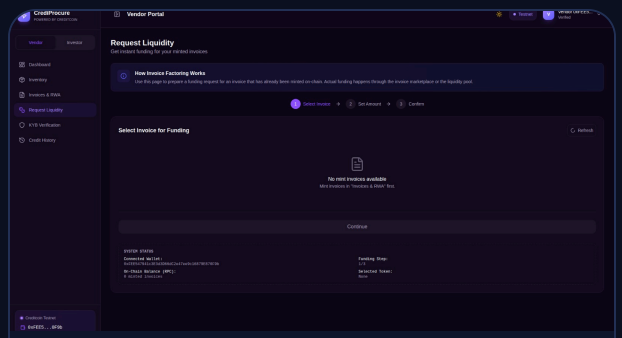
Vendor dashboard overview.



Inventory management for procurement context.



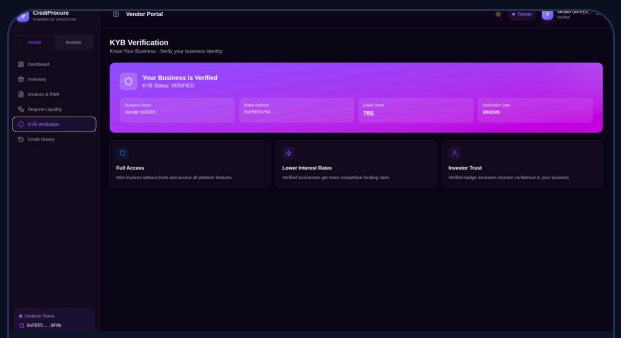
Invoice drafting and RWA minting flow.



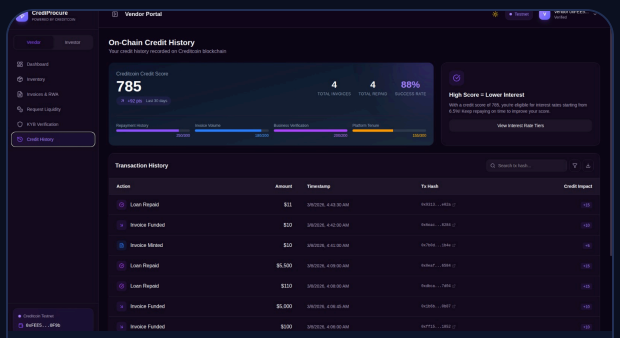
Liquidity request preparation and terms review.

COMPLIANCE AND CREDIT

KYB validation and event-driven credit history.



KYB verification module.



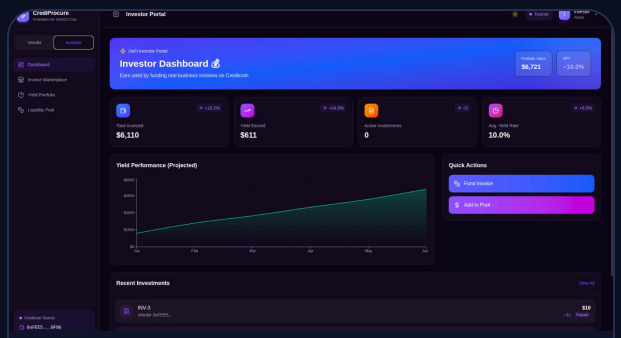
On-chain credit history from funding and repayment events.

Why this matters

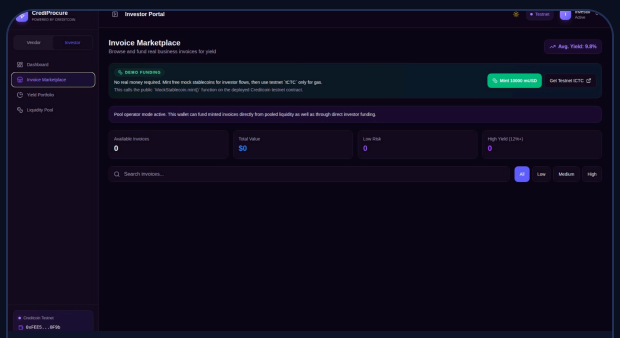
- Improves lender confidence with transparent borrower history.
- Creates reusable on-chain signals for future risk scoring.
- Supports compliance-ready progression toward production rollout.

INVESTOR FLOW

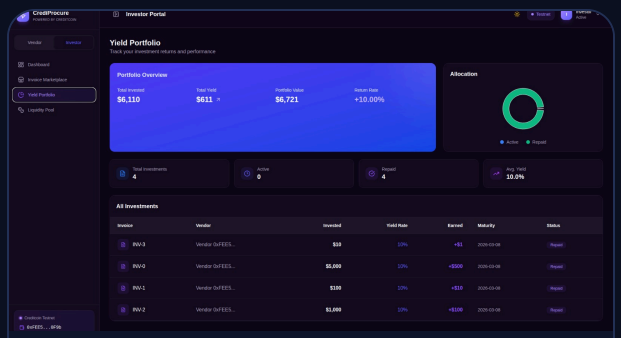
Investor experience across discovery, allocation, and yield tracking.



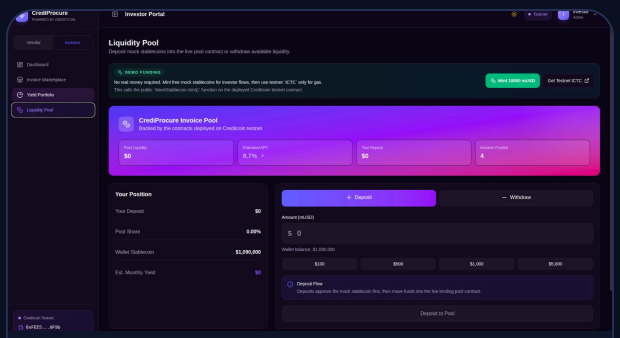
Investor dashboard with performance summary.



Invoice marketplace for direct funding.



Yield portfolio and allocation tracking.



Liquidity pool deposits and withdrawals.

ARCHITECTURE

Three-contract protocol on Creditcoin testnet.

InvoiceNFT.sol

ERC-721 invoice tokenization with immutable lifecycle state.

LendingPool.sol

Dual funding model: direct invoice funding + pooled liquidity.

MockStablecoin.sol

Test token for deterministic end-to-end demo execution.

Current scope

- On-chain data: marketplace, funding events, repayment events, pool balances.
- Local-first modules: drafts, inventory, and KYB state for fast MVP iteration.
- Next: stronger risk model, syndication support, and mainnet compliance layer.

TRACTION AND LINKS

Validated MVP with live infrastructure and submission assets.

MVP

End-to-end testnet flow validated.
